

Tech Info: Dummy “Regulators” Inside Some PX-4 Models WHEN A REGULATOR REALLY ISN’T A REGULATOR

All PennTex Charging Systems have a external voltage regulator. The part number PA-4205 “regulator” inside some PX-4-210 alternators is a “regulator” in appearance only. It’s a “dummy” regulator and some have “DUMMY” stamped on them.

The PA-4205 serves as connection point for the 2-wire alternator plug. There are no electronics in it and it doesn’t regulate current in any way. If one of the two connections inside goes open, it must be replaced with another “dummy” regulator for the charging system to operate properly.
