Tech Info: Dummy “Regulators” Inside Some PX-4 Models WHEN A REGULATOR REALLY ISN’T A REGULATOR

We use external voltage regulators in all of our charging systems. The part number PA-4205 “regulator” inside some PX-4 alternators is a “regulator” in appearance only. It’s a “Dummy” regulator and has “DUMMY” stamped on it. It serves as connection point for the 2-wire alternator plug and as pass-through for the circuits to them. It doesn’t regulate current in any way. It must be replaced with another “dummy” regulator for the charging system to operate properly.
