

# PennTex Voltage Regulators- 12 Volt

THE PENNTEX PX-1000, 2000, AND 3000 REGULATORS ARE INTERCHANGEABLE WITH 12-VOLT PX-4000 REGULATORS.

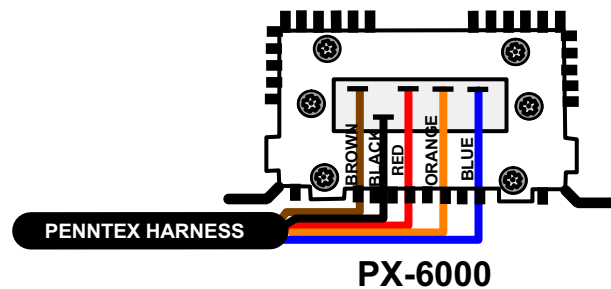

Regulator Top View

THE PATENTED PENNTEX PX-5000 REGULATOR SHOULD BE REPLACED WITH ANOTHER PX-5000 REGULATOR.

**PX-5000**

The regulator is a maximum of 72 inches away from the alternator because that's how long the harness is. Trace the harness from the plug at the brush holder with one orange and one blue wire and follow themain harness to the firewall. There will be a white plastic pass-through tube at the firewall. Locate the harness on the inside of the vehicle and trace the harness to the regulator. All vehicles after 2001 use the PX-4000,PX-5000, or PX-6000 regulator. PennTex recommends that the regulator be mounted inside the vehicle. If the regulator is mounted in the engine compartment, use the photo and drawings above to identify it.
